

MATMUT - DATA SCIENCE PROJECTS

➤ CONTEXT AND ISSUES

- Matmut is carrying out important work on Data. The mutual has created a platform made up of about twenty POs and 240 developers working in Agile mode.
- The platform includes in particular 5 teams dedicated to Data : they cover BI, AI and Data Science topics.
- We accompany this system with the provision of several resources.

➤ RESULTS

- Data Science is becoming a major asset for the mutual insurance company : data analysis and prediction reinforce the relevance of its actions and their targeting.
- Matmut improves the experience and satisfaction of its customers. Internally, it reduces its various risks (financial, attrition...), while optimizing its business processes.

MATMUT - DATA SCIENCE PROJECTS

➤ OUR SUPPORT

4 resources have integrated the Matmut device around Data-Science two POs, a technical expert and a developer. When the business expresses a need, a "squad" is formed to define, frame, carry out and monitor the project.

Among the projects carried out are studies to reduce the attrition rate of multi-equipped households, the health attrition rate or to make predictions about the risk of non-payment.
