

1400MGE

Decision support tools

Realization

Implementation of Data-Visualisation portfolios, integrating forecasts and a simulation tool.

Available data

Operational data exposed in a DWH

Modeling

Predictions of some variables with Machine Learning models (Regressions)
Simulation tool

Other possible applications:

The integration of a simulation tool directly into a Data-Visualization tool offers new perspectives between the decision-making and operational worlds.

Indeed, simulating inputs allows us to anticipate future states. This can be applied to all sectors of activity.

Year of Achievement
