

ARLAS Platform for Insdex

Index-based parametric insurance allows the insurance industry to leverage innovative technology for risk assessment and allocation. Insdex, harnesses geospatial data for index-based insurance, through ARLAS Platform. This exposes risk drivers for business, analyse trends and seasonality.

AIMS

Skyline Partners is a private-equity funded UK Insurtech company, focusing solely on index-based parametric insurance. Skyline aggregates high value data from multiple sources on Renewable Energy, Agriculture or Natural Catastrophes. The aims are to develop a **Skyline owned index insurance platform Insdex®** to facilitate and spread the use of index insurance.

PRODUCTION

We deployed ARLAS Platform to visualize data patterns in a matter of seconds, to provide a risk management and decision-making tool that is fully embedded with Skyline’s index insurance.

We operates Insdex within the **ARLAS Cloud** infrastructure.

BENEFITS

Solar insdex is a unique index insurance solution by Skyline for renewable solar energy that brings a **risk transfer and management platform for clients** to explore, monitor and insure in case of the lack of solar radiation.

The same data used to pay claims will be used to monitor their risks in full transparency for customers and risk carriers
